8Manage PM

8Manage Agile supports short iterations for incremental product development and caters for dynamic changes in competitive landscape and product requirements. As needed, 8Manage Agile can also be extended to allow some degree of traditional project control (e.g., time, cost).

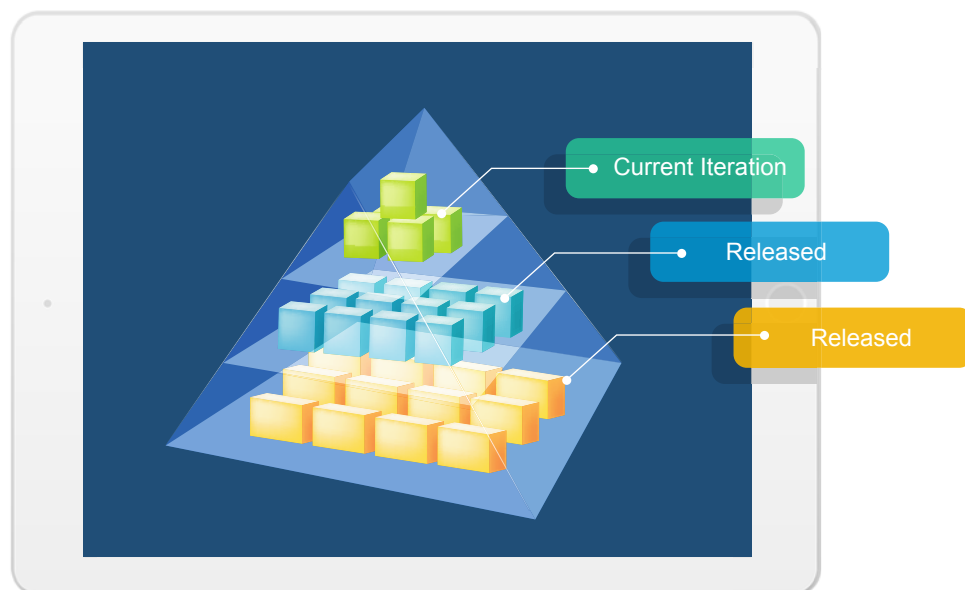

1. Managing Entire Project On One Screen

8Manage Agile is very simple to use and the user can manage her entire project on one screen. Product requirements can be expressed as scenarios or stories and post them on the storyboard. Story point and responsible person can then be assigned to each story in each iteration.
